DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-54, 83-92, and 128-129 drawn to a catalytically active nucleic acid molecule, biosensors comprising said nucleic acid molecule, and vectors comprising said catalytically active nucleic acid, classified in class 536, subclass 23.1.
 - II. Claims 55-81, and 93-127, drawn to methods of isolating a regulatable catalytically active nucleic acid molecule, classified in class 435, subclass 6.
 - III. Claim 82 and 130-136, drawn to a method of modifying a target or a method of modulating expression of a nucleic acid, classified in class 435, subclass 375.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the catalytically active nucleic acid molecules of invention I can be used in a method for isolating effectors which interact with or regulate the catalytic activity of said catalytically active nucleic acid molecules.
3. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process

as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the catalytically active nucleic acid molecules of invention I can be isolated by standard chemical synthetic methods commonly known in the art, wherein a specific catalytically active nucleic acid (for example a ribozyme or DNAzyme, the structures of which are well known in the art), having a specifically designed structure, is synthetically made by standard procedures.

4. The methods of inventions II and III are drawn to patentably distinct methods, comprising distinct method objectives, steps, reactants, and outcomes.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
